

the outdoor classroom food chains

name:

A food chain shows how each living thing gets food. At the bottom of the food chain are plants like grass. Plants get the energy they need from the sun, and this energy is passed along the food chain as they are eaten by other living creatures.

Look around you for evidence of food chains.

	evidence found
mini beasts that break down natural materials	
man	
green plants	
meat eaters (carnivores)	
seed eaters (herbivores)	

Can you draw a food chain using the evidence you have found?
Use the back of this sheet to draw your food chain

Which category had most evidence?
Which category had least evidence?
Why do you think this was?
